## 2024-2025 Testing Scores

### IOWA ASSESSMENTS – Standardized Testing

The Iowa Assessments are a series of group-administered achievement tests for grades K-12 which measures a student's knowledge in subject areas that students have learned in school – reading, language arts, mathematics, science and social studies.

Scores on the Iowa Assessment can be compared with scores earned by a nationally representative sample of students who took the test (the norm group). The Iowa Assessment score that reflects this comparison is called a national percentile rank (NPR). If a student's national percentile rank in Reading is 62, then the student scored as well as or higher on this subtest than 62% of his/her same-grade peers in the national norm group. The percentile ranks range from 1 to 99. The national average in all subtests is 50%.

Other scores received from the Iowa Assessment may include:

- Scale scores (total score received for the subtest)
- Raw scores (number of questions the student answered correctly)
- Grade equivalent scores (number that describes the student's location on an achievement continuum of grades and months, at which the typical student receives the scale score)
- Number attempted (the number of items the student answered)

Score reports generally contain a narrative that helps with understanding and/or interpreting the score results.

Grade: Kindergarten

A grade equivalent (GE) score is a norm-referenced, decimal-based number (e.g., 4.8) indicating where a student's performance falls on an achievement continuum compared to the typical student in a specific grade. The number before the decimal is the grade, and after is the month.

For instance, kindergarten students with an 1.4 GE score performed as well on the test as a typical 1st-grader who is 4 months into the school year.
